Create Alarm in Cloudwatch

Select CPU Utilization as monitoring

Fill the info to triggering the alarm

The screenshot shows the 'Specify metric and conditions' step in the AWS CloudWatch console. The left sidebar indicates the current step is Step 1. The main content area is divided into three sections: Data source, Type, and Metric/Conditions.

Data source: Select the type of data to monitor. The 'Metrics' option is selected, with the subtext 'Monitor CloudWatch metrics'. Other options are 'Logs' (Monitor CloudWatch log queries) and 'Alarms' (Combine multiple alarms).

Type: Choose the metric type for this alarm. The 'Classic' option is selected, with the subtext 'Use the standard CloudWatch metric selection experience.' The other option is 'PromQL' (Use PromQL queries to define the metric for this alarm).

Metric: The 'Namespace' is 'AWS/EC2'. The 'Metric name' is 'CPUUtilization'. The 'Instance ID' is 'cloudwatch-omiet'. There is an 'Edit' button next to the metric name.

Conditions: The 'Threshold type' is 'Static' (Use a value as a threshold). Other options include 'Anomaly detection'.

The bottom of the screen shows a Windows taskbar with various application icons and a system clock indicating 20:18 on 04-10-2026.

Create cloudwatch topic for it

The screenshot shows the 'Configure actions' step in the AWS CloudWatch console. The left sidebar indicates the current step is Step 2. The main content area is titled 'Notification' and contains several sections.

Alarm state trigger: Define the alarm state that will trigger this action. The 'In alarm' option is selected, with the subtext 'The metric or expression is outside of the defined threshold.' Other options are 'OK' (The metric or expression is within the defined threshold.) and 'Insufficient data' (The alarm has just started or not enough data is available). There is a 'Remove' button next to the 'Insufficient data' option.

Send a notification to the following SNS topic: Define the SNS (Simple Notification Service) topic that will receive the notification. The 'Create new topic' option is selected. Other options are 'Select an existing SNS topic' and 'Use topic ARN to notify other accounts'.

Create a new topic... The topic name must be unique. The text 'cloudwatch_topic' is entered in the input field. Below the input field, it states: 'SNS topic names can contain only alphanumeric characters, hyphens (-) and underscores (_).'

Email endpoints that will receive the notification... Add a comma-separated list of email addresses. Each address will be added as a subscription to the topic above. The email address 'bacchavse05@gmail.com' is entered in the input field. Below the input field, it states: 'user1@example.com, user2@example.com'.

There is a 'Create topic' button at the bottom of the 'Create a new topic...' section.

The bottom of the screen shows a Windows taskbar with various application icons and a system clock indicating 20:22 on 04-10-2026.

Alarm created (But not confirm by user)

The screenshot displays the AWS CloudWatch Alarms console. The left sidebar shows the navigation menu with options like Ingestion, Dashboards, Alarms (1), AI Operations, GenAI Observability, Application Signals (APM), Infrastructure Monitoring, Logs, Metrics, Network Monitoring, and Setup. The main content area is titled 'Alarms (1)' and includes a search bar, a 'Quick filters' dropdown, and a table of alarms. The table has columns for Name, State, Actions, Actions muted, Last state update (UTC), and Condition. One alarm is listed: 'Priority : Ec2 instance reached 50 percent' with a state of 'OK', actions enabled, and a last state update of '2026-10-04 15:00:47'. The condition is 'CPUUtiliza minute'. At the top right of the console, there are buttons for 'Clear selection', 'Create composite alarm', 'Actions', and 'Create alarm'.

Name	State	Actions	Actions muted	Last state update (UTC)	Condition
Priority : Ec2 instance reached 50 percent	OK	Actions enabled	-	2026-10-04 15:00:47	CPUUtiliza minute

Confirm it from your Email

Alarm created successfully

when the CPU reaches it limit it sends you email as a Alarm From AWS cloudwatch
